-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ayers. Ayers discloses a method for forming hydrazine by reacting hydrogen with nitrogen, wherein the nitrogen includes absorbed photons from a laser. (See the paragraph bridging columns 11 and 12.) Regarding claim 1, it would be obvious to interact the excited nitrogen of Ayers with high pressure nitrogen-hydrogen mixtures to form the hydrazine, since Ayers suggests at col. 4, lines 25-27 that high pressures may be employed. Regarding claims 2-11, it would be obvious to cool the formed hydrazine to provide liquid hydrazine, since hydrazine is typically utilized in the form of a liquid. Regarding claims 12-21, it would be obvious to react the excited nitrogen of Ayers with water to form hydrazine, since one of ordinary skill in the art would recognize that any suitable source of hydrogen, such as water, could be employed to react with the nitrogen.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,3 and 12-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is indefinite as to whether the terms recited

Art Unit: 1754

in parentheses are positive limitations. In claim 12, it is indefinite as to what would constitute a "large number" of photons.

Burwell et al is made of record for disclosing the reaction of vibrationally excited nitrogen.
